

Microsoft Dynamics CRM Project Services Lessons

Joshua Behl
Minnesota State University Moorhead
Moorhead, Minnesota

Abstract: Like most business-related disciplines, effective project management requires the use of tools to ensure that projects are completed on time, on budget, and within scope. While there are number of project management software tools that are in some cases very vertically focused, there are plenty of others that are more broadly focused and leveraged. This curriculum package is a portion of an introductory Project Management course offered at Minnesota State University Moorhead. In this curriculum package, there are six specific lessons ranging from basic skills to moderate skills for students in this course. Additionally, this curriculum package consists of five exercises/labs that students do in this online course. Finally, for each lesson, there is a high-level outline as well as a link to the recorded video lecture used for this course.
